T-Roc

You'll just want one

Few vehicles exude confidence and character quite like the Volkswagen T-Roc. Volkswagen's latest compact SUV is a rare find – a vehicle that successfully combines all the attributes of a premium SUV in a package that is versatile, stylish and unmistakably sporty.

It's the ruggedness and sheer practicality of the T-Roc that sets it apart from other vehicles on the road. Available in two versions – 110TSI Style and 140TSI Sport – the T-Roc has been designed and built to be the perfect city companion. Here is a premium compact hatchback that affords all the benefits of an urban run-around, while possessing the unmistakable confidence and dynamism of an SUV.

The T-Roc is ready to take on a range of everyday driving challenges, with its robust build and onroad prowess putting it at a distinct advantage. Of course, there are other SUV benefits to be enjoyed, such as the T-Roc's high riding position, which provides a commanding view of the road, and ease of getting in and out of the vehicle.

Meanwhile, 140TSI Sport's combination of effortless sporting performance and the 4MOTION all-wheel drive provides a compelling and reassuring driving experience.

The T-Roc feels at home on every road surface and matches supreme riding comfort with all the pleasures of a versatile and stylish cabin. With its surprisingly generous interior space, outstanding fuel efficiency and a host of infotainment, driver aid and safety technology, the T-Roc is a car to be enjoyed with every single trip. At the same time, its flowing contours and concise proportions make it a genuine head-turner.

The Volkswagen T-Roc is confident to its very core – and has the performance capabilities and looks to back it up.

140TSI Sport model shown with optional Sound & Style and Luxury package

Exterior

The Volkswagen T-Roc combines a svelte coupe-like design with the assertive presence and dynamism of a compact SUV. Its bold on-road stance and striking body lines convey its sporty intent, while its confident character shines through in purposeful design features from front to rear.

SUV styling is immediately apparent in the T-Roc's distinctively wide front end, which features a prominent black grille and front bumper in body colour, together with distinctive black-textured front lower air intakes. Low-profile-design LED headlights with Light Assist portray a hint of menace and feature a unique LED daytime driving light and indicator signature to truly set the T-Roc apart.

The T-Roc's sweeping roofline with chrome roof rails give it unmistakable urban attitude, as do appealing 18-inch alloy wheels (19-inch Suzuka alloy wheels optional for the 140TSI Sport).

At the rear, distinctive LED tail lights form a cohesive whole with the T-Roc's wide tailgate, which features a raked rear windscreen and a centrally placed model name. The 110TSI Style lives up to its name with contrasting black gloss roof and mirrors.

The Volkswagen R Team responsible for developing the R performance models has designed an R-Line sports styling package for the 140TSI Sport version to give it even further appeal.

The T-Roc's already strong profile and stance are bolstered by prominent R-Line design highlights such as an R-Line logo on the T-Roc's radiator grille, R-Line side sill panels and wheel arch extensions, and an R-Line rear bumper with black sports diffuser.

A vehicle this bold and stylish, and packing so many sporty features, is sure to make you the envy of your friends.

- 01** R-Line sports styling
- 02** LED tail lights

- 03b** 18" Sebring alloy wheel
- 03c** 19" Suzuka alloy wheel (optional)

Interior

The Volkswagen T-Roc is a compact SUV but its spacious interior would have you believe it is a much larger vehicle. Not only is the T-Roc's cabin surprisingly light and airy, it provides exceptional visibility courtesy of its high riding position – and its layout places a premium on driver and passenger comfort.

A quality feel pervades the T-Roc's cabin with its use of eye-catching trim highlights, LED ambient lighting and use of decorative inlays. The T-Roc's leather-covered flat bottomed steering wheel with brushed aluminium inserts, and leather and aluminium finish gearshift knob, are a pleasure to touch and put the driver at the centre of the action.

And you'll always feel supported by the T-Roc's comfortable front seats with height and lumbar adjustment, which will help you arrive fresh even after a long drive.

The T-Roc is the latest in a range of Volkswagen vehicles to prioritise the multimedia experience for driver and passengers. An 8-inch Composition Media system (8-inch Discover Media navigation system in the 140TSI Sport) mounted at the highest point of the dashboard puts a vast array of infotainment options right at your fingertips.

You can take the digital experience to the next level by selecting the T-Roc's Digital Cockpit (standard in the 140TSI Sport and optional in the 110TSI Style). The Digital Cockpit puts you in charge of a high-resolution digital instrument display that can be customised to show an impressive array of driver assistance, driver aid and navigation functions.

Outstanding interior ergonomics don't come at the cost of flexibility. The T-Roc offers excellent luggage capacity, which can be expanded further with the T-Roc's 60:40 split/folding rear seat backrest.

With its focus on space, practicality and unadulterated fun, the new Volkswagen T-Roc is the perfect fit for anyone with an active lifestyle.

02 Spacious luggage capacity

Safety and Technology

The Volkswagen T-Roc isn't one to rest on its aesthetic and performance laurels. It packs a mighty punch when it comes to the infotainment and driver aid technology it combines into one package.

Standard in the 140TSI Sport and optional in the 110TSI Style (as part of the Sound & Vision package) is Digital Cockpit, a full-colour, high-resolution 10.25-inch colour display with customisable screens that reveal an array of essential driving information. Together with the T-Roc's 8-inch infotainment system, which features an App-Connect interface for Apple CarPlay and Android Auto, you have everything at your disposal for an informed and entertainment-packed drive.

Like every other Volkswagen, the T-Roc brims with intelligent assistance systems for driving, parking and safety. These features are bundled together under the name IQ.DRIVE. As well as supporting the driver in everyday situations such as lane changing, preventing accidents and increasing everyday comfort, the systems contained within IQ.DRIVE reveal Volkswagen's ambition to reach its goal of truly autonomous driving.

The T-Roc is proof that that goal is just around the corner. Technology such as Adaptive Cruise Control (ACC)*, Front Assist, Pedestrian Monitoring* and Lane Assist* can all help reduce the risk of collisions around town and on the highway. Manoeuvring the T-Roc into tight parking spaces is a cinch with Rear View Camera (RVC)* technology, Park Assist* and Manoeuvre Braking* sensors at front and rear.

The T-Roc also looks out for you if you're tired at the wheel. Driver Fatigue Detection checks for signs of fatigue and provides a visual and audible signal when it's time to take a break.

01 Digital Cockpit (optional on Style with Sound & Vision package)

02 App-Connect~ featuring Apple CarPlay®

03 Rear view camera*

Optional Packages

Take your T-Roc to the next level by choosing from three optional packages designed to maximise driver comfort and enjoyment.

For an enriching audio experience, the Sound & Vision package for the 110TSI Style adds the Digital Cockpit, 8-inch Discover media navigation system, wireless App-Connect and an impressive 300W Beats audio system with an 8-channel digital amplifier and subwoofer.

The same Beats audio system can be added to the 140TSI Sport when you choose the Sound & Style package, which also incorporates appealing 19-inch Suzuka alloy wheels and Adaptive Chassis Control to allow fine-tuning of the vehicle's driving characteristics. Select from among Normal, Comfort and Sport damper settings to optimise the vehicle towards comfort or sportoriented driving.

No matter whether you choose the 110TSI Style or the 140TSI Sport, you can add a layer of comfort and convenience to every driving experience by selecting the T-Roc's Luxury package.

Vienna leather appointed seat upholstery[#] with contrasting colour tones puts you in the lap of luxury, while heated front seats help ward off winter chills by keeping you snug and warm.

The inclusion of a panoramic glass sunroof in the Luxury package means you can let light and warmth penetrate the cabin all year round. It's hard to beat the feel of the winter sun on your shoulders with the sunroof closed, but the sunroof is just as delightful to use during the warmer months.

The sunroof's electric slide and tilt adjustment means it can be opened with the simple touch of a button, while the integrated wind deflector means you'll never be buffeted by wind. The sunblind can be drawn to cut down distracting glare on particularly sunny days.

Also a feature of the package is an electrically operated tailgate that offers all the convenience of opening or closing the T-Roc's boot by depressing a button in the electronic key fob or by touching a button embedded in the tailgate.

01 Beats audio system (part of Sound & Vision and Sound & Style packages)

02 19" Suzuka Alloy wheels (part of the Sound & Style package)

03 Panoramic sunroof (part of the Luxury package)

Colours & Upholstery

The 110TSI Style is available in a range of premium colours, which means you can personalise it to suit you. Choose Pure White and Flash Red paint finishes as standard, or optional Turmeric Yellow, White Silver, Ravenna Blue or Indium Grey metallic colours, all with contrasting black gloss roof and door mirrors.

The 110TSI Style's Black Oak-Ceramique comfort cloth seat upholstery makes every drive a comfortable one, while the optional Luxury package adds an extra layer of flair and discernment in the form of Quartzite-Ceramique Vienna leather appointed seat upholstery[#].

The print process does not allow for exact reproduction of the exterior or the upholstery colours. Please contact your Volkswagen Dealer for further information on colours and upholstery combinations.

Colours & Upholstery

The 140TSI Sport comes in a tantalising selection of paint finishes to match your lifestyle. Choose Pure White or Flash Red paint finishes as standard or select from a range of optional metallic colours such as Atlantic Blue, Indium Grey and White Silver. Deep Black Pearl Effect is also available as an attractive optional paint.

The 140TSI Sport's Black-Ceramique sports cloth seat upholstery is exceedingly plush and comfortable. Choose the Luxury package in the T-Roc and receive Quartzite-Ceramique Vienna leather appointed seat upholstery[#], which is extra supple and satisfying to touch.

Volkswagen Accessories

Sports & Design, Transport

01 Door sill protection film

A detail which is both sensible and functional to protect the heavily used door sills in the front and rear entrance areas against scratches and damage.

Part No. 2GA071310AZMD

02 Tailgate protective strip

The protection strip in high-gloss chrome protects the tailgate edges and adds to the appearance of the vehicle.

Part No. 2GA071360

03 Door sill protection plate

The high-quality aluminium door sill plates with T-Cross lettering not only protect the heavily used entrance area but adds a more premium look to your vehicle. For the front.

Part No. 2GA071303

04 Loading sill protection plate

The loading sill protection in stainless steel look provides instant, stylish protection for an even more premium look to your vehicle.

Part No. 2GA061195

07 Side Steps

Part No. 2GA071691

08 Ski and snowboard carrier

When it comes to top of the mountain, there's nothing better on top. You can take up to six pairs of skis or up to four snowboards on the roof of your vehicle, comfortably and safely. The lockable ski and snowboard holder can quickly be mounted on the roof bars and is easy to operate.

09 Roof Bars

Load limit to be included for accessories. Work with Theo on this. Standard moving forward for all accessories.

Part No. 2GA071151

10 Bicycle carrier

The aerodynamic bicycle holder has a quick-fastening system that makes it easy to fit and can be locked for piece of mind.

Part No. 000071128F

11 Premium Roof Box 340L & 460L

The premium roof box with its innovative aerodynamic design and quick and easy installation. Dual lift opening system with a 3-point central locking system. Available in 340 and 460 Litre capacities.

340L, 190cm Length Part.no 000071200AD

460L, 230cm Length Part.no 000071200AE

Volkswagen Accessories

Protection, Travel & Comfort

12 Reversible luggage compartment mat

The perfectly fitting, reversible luggage compartment mat helps out when you have sensitive, dirty or damp goods to take. You can choose from soft and gentle velour on one side or sturdy, anti-slip plastic nubs on the other. To make things even easier, a built-in protective cloth can be folded out from the reversible mat to help avoid scratches to the loading sill when you're loading and unloading.

Part No. 2GA061210

15 Rubber floor mats

Keeping the footwell clean all year round: The perfectly fitting and durable floor mat set with T-Roc lettering on the front mats are attached to the vehicle floor using the integrated fastening system to prevent slipping.

Front: Part.no 2GB06150282V

Peace of Mind

5 years Unlimited Kilometre Warranty

At Volkswagen, we pride ourselves on the highest quality standards that come with German engineering.

We back this commitment with a 5 year unlimited kilometre warranty on all new Volkswagen vehicles*.

1 year Roadside Assist

Every new Volkswagen comes with a 1 year Roadside Assist membership^.

That's 24 hour roadside assistance, emergency accommodation, car rental and towing as well as property and other assistance, all included for added peace of mind.

Volkswagen Care Plans

Volkswagen Care Plans† have you covered for your first 3 or 5 scheduled services, providing you savings off the total Assured Service Pricing RRP. It's convenient, hassle-free scheduled servicing easily available for purchase at your local Volkswagen Dealer.

Assured Service Pricing

Assured Service Pricing# gives you the transparency of knowing how much your service will cost up front.

Our Volkswagen Dealers have access to the latest diagnostic equipment and tools. Plus, they use Volkswagen Genuine Parts® to ensure your Volkswagen stays a Volkswagen.

You're in safe hands at your Volkswagen Dealer when it comes to servicing.

*Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners/warranty.html>. Your rights under this warranty are provided in addition to, and in some cases overlap with, consumer guarantees under the Australian Consumer Law and do not limit or replace them.

^Volkswagen Roadside Assist is provided by AWP Australia Pty Ltd ABN 52 097 227 177 trading as Allianz Global Assistance, under an arrangement with Volkswagen Group Australia Pty Limited ABN 14 093 117 876. Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners/roadside-assist.html>.

†Volkswagen Care Plans are available at participating Volkswagen Dealers for all models and covers standard items as contained in each scheduled service interval only. These Care Plans can only be purchased prior to the first scheduled service and up to 22,500 km/15 months (whichever occurs first) for all models except Volkswagen Crafter models, which is 30,000 km/15 months (whichever occurs first). The timeframe takes effect from when the vehicle is first reported in our system as 'sold'. Discount structure varies by model. For details of what is not included in a scheduled service, see <https://www.volkswagen.com.au/en/owners/volkswagen-care-plans.html>.

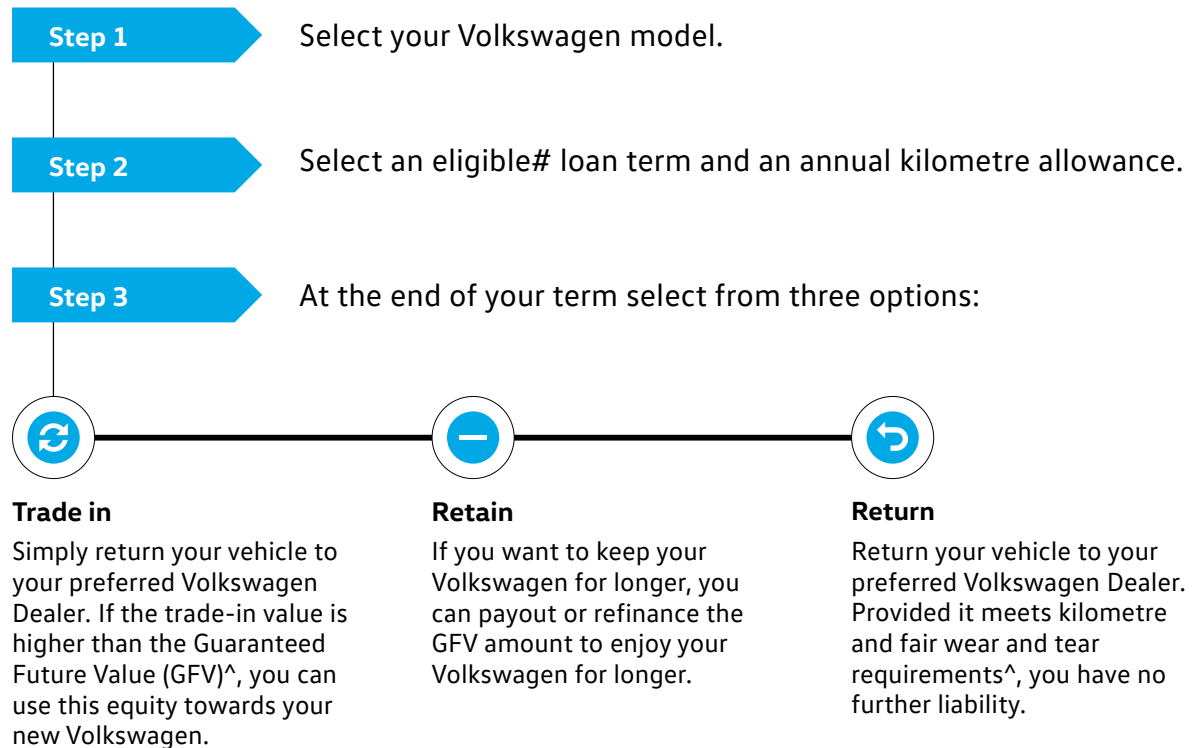

#Assured Service Pricing applies to the first 5 standard scheduled services of your vehicle which are scheduled to occur at every 15,000 km/12 month interval (whichever occurs first) or for Volkswagen Crafter models only, 20,000 km/12 month interval (whichever occurs first). On or before 31 December each year, Volkswagen will publish the maximum price for a specified Scheduled Service that will be applicable from, and remain fixed for, the following calendar year only. For details on the Eligible Model List, pricing, items not included and for full terms and conditions, please see <https://au.volkswagen.com.au/service-pricing-guide>.

Volkswagen Choice[^]

Guarantee the minimum future value of your Volkswagen

Naturally we understand that your Volkswagen represents a valuable investment, so we understand that you want to maintain it in premium condition. Volkswagen Choice[^] is a finance program tailored to the requirements of Volkswagen owners by providing assurance around your Volkswagen's future value[^], whilst offering simple monthly instalment financing options.

Whether you are selecting your new Volkswagen for business or personal use, you can choose the contract term that best suits your requirements. Enjoy the confidence that comes from having locked in a minimum value up front to be attributed to your vehicle at the end of your contract[^]. There are also no account keeping fees with a fixed interest rate.

[^]Volkswagen Guaranteed Future Value consists of an option to return your vehicle to Volkswagen Financial Services (VFS) ABN 20 097 071 460, Australian Credit Licence 389344, at the end of the term and requires VFS to purchase the vehicle at an agreed price determined by VFS, known as the Guaranteed Future Value (GFV). #Eligible loan terms include 12-60 months, vary by model and are subject to change, ask dealer for more information. At the end of the term, you can elect to: (1) trade-in; (2) return; or (3) retain the vehicle by paying the GFV, which is a lump sum owed to VFS at the end of the loan term after all repayments have been made. You will be liable for any loan contract deficit and additional charges if you exceed the nominated kilometre allowance and/or the vehicle is not in an acceptable condition. Available on new and demonstrator Volkswagen vehicles for selected models. Contact your Official Volkswagen Dealer to verify eligible vehicles for this program. Fleet, government, rental buyers, hire car and chauffeur companies excluded.

CO ₂ emission g/km	142	163
Fuel tank capacity litres	50	55

* The Start/Stop system is designed to reduce fuel consumption and CO2 emissions. It achieves this by automatically switching off the engine while the vehicle is stationary and then starting it again automatically when the driver wants to drive off. There are certain operating conditions where the Start/Stop system is deactivated (e.g. during engine warm-up), please refer to the owner's manual for full operating information.

** Fuel consumption figures according to ADR 81/02 derived from laboratory testing. Factors including but not limited to driving style, road and traffic conditions, environmental influences, vehicle condition and accessories fitted, will in practice in the real world lead to figures which generally differ from those advertised. Advertised figures are meant for comparison amongst vehicles only.

Please note figures are sourced from overseas data where equipment levels by model variant may vary.

Glossary

4MOTION[^]

An all-wheel drive system that provides the best possible traction at all road speeds, in all weather and road conditions. An electronically controlled multi-plate clutch directs torque to the axle with the best traction.

When operating under a relatively low load or when coasting, power is primarily distributed to the front axle, thus saving fuel. However, the rear axle can be variably engaged in fractions of a second whenever necessary, even before any wheel starts to slip and therefore reducing the potential for a loss of traction. The wheels of the T-Roc are prevented from spinning even when driving off and accelerating.

Activation of the multi-plate clutch is based primarily on the engine torque demanded by the driver. In parallel, a system within the all-wheel drive control unit evaluates such parameters as wheel speeds and steering angle.

Adaptive Chassis Control*[^]

The electrically controlled dampers of adaptive chassis control constantly adjust to the road conditions, the driving situation and driver's requirements. Selected via and integrated within the functionality of the Driving Profile Selection, the driver can choose between three damper settings – Normal, Comfort and Sport.

Starting from the normal setting, the driver can change the basic character of the car towards sporty or more comfort-oriented driving. In each setting, the adaptive chassis control adjusts the damping to the particular driving situation (up to one thousand times per second) which means it offers an optimum level of driving comfort and enjoyment at all times. Particularly on windy roads and poor surfaces, using adaptive chassis control offers sporty and yet comfortable driving.

Adaptive Cruise Control (ACC)

Adaptive Cruise Control (ACC) is an extension of the conventional cruise control system with advanced capabilities based on a radar sensor. When ACC is activated, the vehicle automatically brakes and accelerates to a speed and distance set by the driver.

If the T-Roc approaches a slower vehicle, the ACC brakes the car to the same speed and maintains the pre-selected distance. Even when a vehicle pulls into the same lane in front of you or slows, your vehicle is automatically decelerated to the pre-selected distance. If the vehicle ahead moves out of your lane, the T-Roc then accelerates up to the preset desired speed.

Deceleration of the vehicle may take place via intervention in the engine management system. If deceleration via engine torque is not sufficient, brake intervention takes place, braking the vehicle to a standstill if the traffic situation necessitates. ACC can be reactivated automatically by depressing the accelerator pedal.

The dynamics of the ACC system can be individually varied by selecting one of the driving programs from the driver profile selector.

Adaptive Cruise Control (ACC) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain.

[^]Only available on selected models *Optional equipment for specific models.

Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

Anti-Slip Regulation (ASR)

ASR is a traction control system that prevents the wheels from spinning under acceleration by reducing engine torque.

Auto Hold function[^]

As soon as the vehicle comes to a complete stop, the ABS hydraulic unit stores the vehicle's final braking pressure. So even when you take your foot off the brake pedal, all four wheels' brakes remain applied, providing increased comfort in stationary traffic. This function is released automatically when you drive off again.

Blind Spot Monitor with Rear Traffic Alert

The Blind Spot Monitor with Rear Traffic Alert system supports the driver in assessing and avoiding dangerous situations, especially in critical situations, e.g. city and heavy traffic. The Blind Spot Monitor detects cars and motorcycles in the driver's blind spot and highlights these vehicles via a LED indicator in the door mirror. Rear Traffic Alert warns the driver of approaching traffic at the rear of the car when reversing via an audible warning followed by a visual message in the Optical Parking System (OPS).

Blind Spot Monitor with Rear Traffic Alert cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Brake Assist

During emergency braking, Brake Assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

Direct Shift Gearbox (DSG)[^]

DSG is a manual gearbox in which the gearshifts are controlled electronically. What makes the DSG unique is that it has 2 separate gear sets operated by 2 clutches. The benefit of 2 gear sets and 2 clutches is that one gear set and clutch is engaged driving the vehicle with the second disengaged clutch having already pre-selected the next gear awaiting for power to be transferred. As the next gear has already been pre-selected prior to power being applied, the gear change only takes 3-4 100ths of a second. There is virtually no interruption to power, traction or acceleration. The DSG also offers Tiptronic gear selection and sports mode.

Glossary

Driving Profile Selection with 4MOTION Active Control[^]

Driving profile selection provides the driver with a wide-ranging choice of settings that can be made to the vehicle according to the driver's preferences. The driver has the option of choosing between the following driving profiles: Normal, Sport, Eco, Comfort* and Individual. The Normal profile offers a comfortable but dynamic driving style. Sport provides faster response of the accelerator pedal, sportier damping and steering, while the DSG switches to Sport mode. Eco mode has been designed to enhance fuel efficiency by including coasting function and by adapting engine performance, earlier gearshift points and consumption-optimised control of the air conditioning system. Comfort* mode offers a more relaxed and comfortable driving experience, primarily through the softer suspension setting of the (optional) adaptive chassis control. The Individual setting allows the driver to separately set various parameters including steering, engine, Adaptive Cruise Control (ACC) and air conditioning.

4MOTION Active Control provides for the convenient selection of on-road and off-road driving profiles for model equipped with 4MOTION by means of a rotary dial. Rotating the dial selects one of four special all-wheel drive modes: Snow, On-road, Off-road (automatic configuration of the off-road parameters) and Off-road individual (variable settings).

Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent.

Electronic Differential Lock (EDL)

EDL improves driving and steering characteristics when accelerating on road surfaces where each wheel has a different degree of traction. The system operates automatically and is combined with the ABS system. Using the ABS wheel sensors, EDL monitors the speed of the individual driving wheels. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system brakes the spinning wheel, transferring engine power to the wheel with the best traction.

Electronic Stabilisation Program (ESP)

ABS and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with pre-determined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also reduces the effects of understeer or oversteer.

Extended Electronic Differential Lock (XDL)

XDL is an extension of the Electronic Differential Lock (EDL) function. When cornering, XDL responds to the load relief at the driven wheel/s on the inside of a corner. The ESP hydraulics are used for the XDL to apply pressure to the wheel on the inside of the corner in order to prevent wheel spin. This improves traction and reduces the tendency to understeer. As a direct result of the one-sided and precise braking pressure, cornering is sportier and more accurate.

[^]Only available on selected models

Fatigue Detection

The driver Fatigue Detection system automatically analyses the driving characteristics and if they indicate possible fatigue, recommends that the driver takes a break. The system continually evaluates steering wheel movements along with other signals in the vehicle on motorways and others roads at speeds in excess of 60 km/h, and calculates a fatigue estimate. If fatigue is detected, the driver is warned by information in the Multi-function Display and an acoustic signal. The warning is repeated after 15 minutes if the driver has not taken a break.

Fatigue Detection cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore determining whether or not they are fit to drive. A driving time of 15 minutes is required in order to assess the driver correctly. The functionality of the system is restricted given a sporty driving style, winding roads and poor road surfaces.

Front Assist with Pedestrian Monitoring function

The Front Assist ambient traffic monitoring system uses a radar sensor to detect critical distance situations and thus help to shorten the braking distance, reducing the risk of a rear-end collision.

The traffic ahead is monitored constantly by the radar at the front. If a vehicle is detected ahead of you in the lane, the distance and the speed relative to it are calculated. If the gap is closing too fast, Front Assist initially warns the driver by means of an audible as well as a visual signal. At the same time, the brake pads are brought into contact with the brake discs and the sensitivity of the Brake Assist is increased. This primes the braking system for a possible emergency stop. Furthermore, an automatic jolt of the brakes warns the driver of the danger. If the driver also fails to react to the warning jolt, Front Assist brakes automatically, helping to avoid a collision or reduce the severity of the accident.

At vehicle speeds below 30km/h, the system monitors the area ahead of the car for vehicles which might present a threat of collision. If a collision is likely, the brakes are first pre-charged and makes the Brake Assist system is made more sensitive: if the driver should notice the risk, the car is ready to respond more quickly to their braking action. However, if the driver still takes no action and a collision becomes imminent, emergency braking is independently applied. If the driver intervenes to try to avoid the accident, either by accelerating hard or by steering, the system will deactivate and allow the driver to complete the avoidance manoeuvre.

Pedestrian Monitoring is an extension of the Front Assist monitoring system. The system uses a radar sensor in the radiator grille to monitor the area in front of the vehicle and within the limits of the system, register certain situations, for example a pedestrian stepping onto the road suddenly. The system then gives an immediate acoustic and visual signal to warn the driver. If the driver does not brake, the system initiates a jolt of the brake as a warning about the critical situation, while at the same time preparing for hard braking. If the driver fails to react, the system automatically performs emergency braking, within system limits. Ideally this will prevent a collision, or at least reduce its severity.

Front Assist with Pedestrian Monitoring cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Glossary

Hill Start Assist (HSA)[^]

Hill Start Assist (HSA) holds the vehicle when the foot brake is released by temporarily locking the brake pressure (for a maximum of 1.5 seconds) to provide comfortable starting-off without rolling back. Hill Start Assist (HSA) operates on inclines greater than 5%.

Lane Assist

Lane Assist is a lane departure warning system that is designed to help reduce the likelihood of the vehicle leaving the road or crossing into an oncoming lane and therefore the risk of accident as a result of driver distraction or a lapse in concentration.

The Lane Assist system monitors the road ahead with the aid of a camera (located near the interior rear-view mirror) which recognises lane markings and evaluates the position of the vehicle. If the vehicle starts to leave the lane, the Lane Assist system takes corrective steering action. If this is not sufficient the driver is warned about the situation by a steering vibration and is asked to take over the steering. Additionally, if no active steering movements by the driver are recognised for longer than approximately 8 seconds, a message will appear in the Multi-Function Display in conjunction with a warning tone. The corrective steering function can be overridden by the driver at any time and the system does not react if the turn indicator is set before crossing a lane marking.

Lane Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore staying in the lane at all times. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system. The Lane Assist system does not activate at a vehicle speed of less than 65km/h.

Light Assist

Light Assist provides enhanced comfort and safety on the road by means of automatic high beam control. A camera on the interior mirror observes the traffic above 60 km/h and in complete darkness, Light Assist automatically switches on the high beam headlights. The system detects vehicles travelling ahead, as well as oncoming traffic and automatically dips the headlights before they are dazzled. Automatic alternation between high beam and low beam headlights ensures optimum illumination of the road ahead.

Manoeuvre braking

Manoeuvre braking assists the driver to avoid or reduce damage in a potential collision by initiating emergency braking. It supports the driver during forward and reverse manoeuvring in a speed range of a maximum 10 km/h. If the risk for an accident is recognised, emergency braking is initiated to minimise possible damage.

Manoeuvre braking cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. The object must be detected by the sensors. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged they need to react accordingly and stop the vehicle.

Multi-collision brake

The multi-collision brake has been designed to provide effective assistance for the driver in the moments after an accident. Multi-collision brake triggers automatic controlled braking once an initial collision has been detected so as to reduce the intensity of further accidents after a collision and can help prevent follow-on collisions with oncoming traffic.

The triggering of the multi-collision brake is based on a collision being detected by the airbag sensors. The ESP control unit limits the deceleration of the vehicle by the multi-collision brake to a defined value and vehicle speed. The vehicle can still be controlled by the driver, even when automatic braking is taking place. The driver can interrupt the multi-collision braking at any time by accelerating or braking even more strongly.

Park Assist

The third generation Park Assist system actively helps the driver when entering or reversing into 90° parking bays, as well as reversing into and driving out of parallel parking spaces. The system works by using sensors mounted either side of the front and rear bumpers together with parking distance sensors front and rear. To park, the driver simply presses the Park Assist button to select the type of parking manoeuvre and uses the appropriate indicator as the car slowly passes the potential parking space. Sensors scan the size of the parking space as the car is driven past and the driver is alerted if the parking space is big enough. If there is sufficient space, the driver stops the car, selects the correct gear and lets go of the steering wheel.

Park Assist will alert the driver of the intended path and subsequently the appearance of obstacles in the Multi-Function Display, within the driver's field of vision. Park Assist then actively supports the driver by taking over the steering control and parks the vehicle in the available space using the ideal course, if necessary with several moves. The driver can however take over the control of the steering at any time and end the automatic parking procedure.

Park Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged or if they are uncertain of the risk, they will need to react accordingly and stop the vehicle, ending the function.

Proactive occupant protection system

The proactive occupant protection system incorporates active and passive safety elements. When the system detects a potential accident situation, the occupants and the vehicle are prepared for a possible accident. Automatic tensioning of the seat belts secures the driver and front passenger in their seats to attain the best possible protective potential of the airbag and belt system. In case of high transverse dynamics the side windows (and optional panoramic sunroof) are also closed, leaving just a small air gap. Closing of the windows offers optimal support to the head and side airbags which results in the best possible protection.

[^]Only available on selected models
